 TREASURER: John Bailey VK2KHB 6582.2192
 SECRETARY: Jim Neil (A/g) VK2VIV 6581.2481

President's Report

I must start the new calendar year with a call for a volunteer to undertake the important role of Field Day Co-ordinator. This year's event on the 12th & 13th of June, which is the Saturday and Sunday of the Queen's Birthday holiday weekend, will be our club's 35th annual Field Day. It is important that the Field Day is a success. As well as being a major field day on the Amateur Radio calendar, the Field Day is ORARC's major fund raising activity for the year. Without the income from the Field Day our club would not be financially viable unless membership fees were substantially increased.

Please consider undertaking the role of Co-ordinator for Field Day 2010. It is a great opportunity to utilize your organizational skills to put something back into your club and make a valuable contribution to Amateur Radio. Please contact Jim Neil VK2VIV or myself if you can help. Remember that the ORARC Field Day is a team effort but it takes a good leader to get the best return on the sum of the individual efforts. If you aren't able to offer your services as Co-ordinator, but would still like to contribute to the Field Day, please contact Jim Neil VK2VIV or myself. Your assistance will be greatly valued. Following the success of last year's dinner, there will be a Field

Day dinner at the Port City Bowling Club on the Saturday evening again this year.

As usual ORARC will have a display at the Mid North Coast Amateur Radio Group 2010 Radio Expo in Coffs Harbour on Sunday the 24th of January. It is another opportunity to promote our club and its services including our Field Day weekend. To those who are attending the Expo, please take a little time to help out at our display. We will have our ORARC 2010 calendars on sale.

The Central Coast 2010 Field Day at Wyong on Sunday the 28th of February is another opportunity to promote our club and our Field Day weekend. It has become a tradition for as many ORARC members as possible to wear our club tee shirts. There are always lots of photographs taken at Wyong and our yellow and black tee shirts stand out in the crowd. As most of us are aware, 2010 is the 100th anniversary of the formation of the Wireless Institute of Australia. The Central Coast Amateur Radio Club is hosting a Centenary Dinner in association with Amateur Radio NSW at the Wyong Bowling Club prior to the Field Day on the evening of Saturday the

President's Report (Cont'd from P1)

27th February 2010, commencing at 1800 hours. Hopefully our club will be well represented at this dinner as I know many of us arrive on the Central Coast prior to the Field Day.

I have started the New Year with a Field Day column so I should mention the 2010 Urunga Convention on the 3rd and 4th of April which is Saturday and Sunday of the Easter Weekend. Our club has again been invited to bring its display to Urunga. Our membership is always well represented at this very enjoyable Field Day.

For more details of the various Field Days, just point your browser at the web sites of the respective clubs.

Now that I have prompted everyone to plan to attend at least four Amateur Radio Field Days in the first half of the year, I would like to take this opportunity to wish all members and their families the very best for 2010.

Henry Lundell VK2ZHE (President)

Headphone Distribution Box

By VK2ATM

Criteria: Build a headphone distribution device to minimize distractions inside the caravan when operating multiple transceivers.

Subsequent discussion decided to add microphone input to allow instruction and transmit facility and separate volume control for each headphone.

A data input/output to allow digital modes was also included in the wish list. To cap it off it was decided to make two of them.

Design: To eliminate loading of the audio source at the microphone socket of the transceiver, a single transistor pre-amp driving parallel emitter followers with variable output level control was used to manage the primary objective. The pre-amp is conventionally forward biased to give approx two milliamp collector current for class "A" operation, with an un-bypassed ten ohm emitter resistor to provide thermal stability and a small amount of negative feedback.

The emitter followers use a common input forward biased to give approx half rail voltage at the emitters.

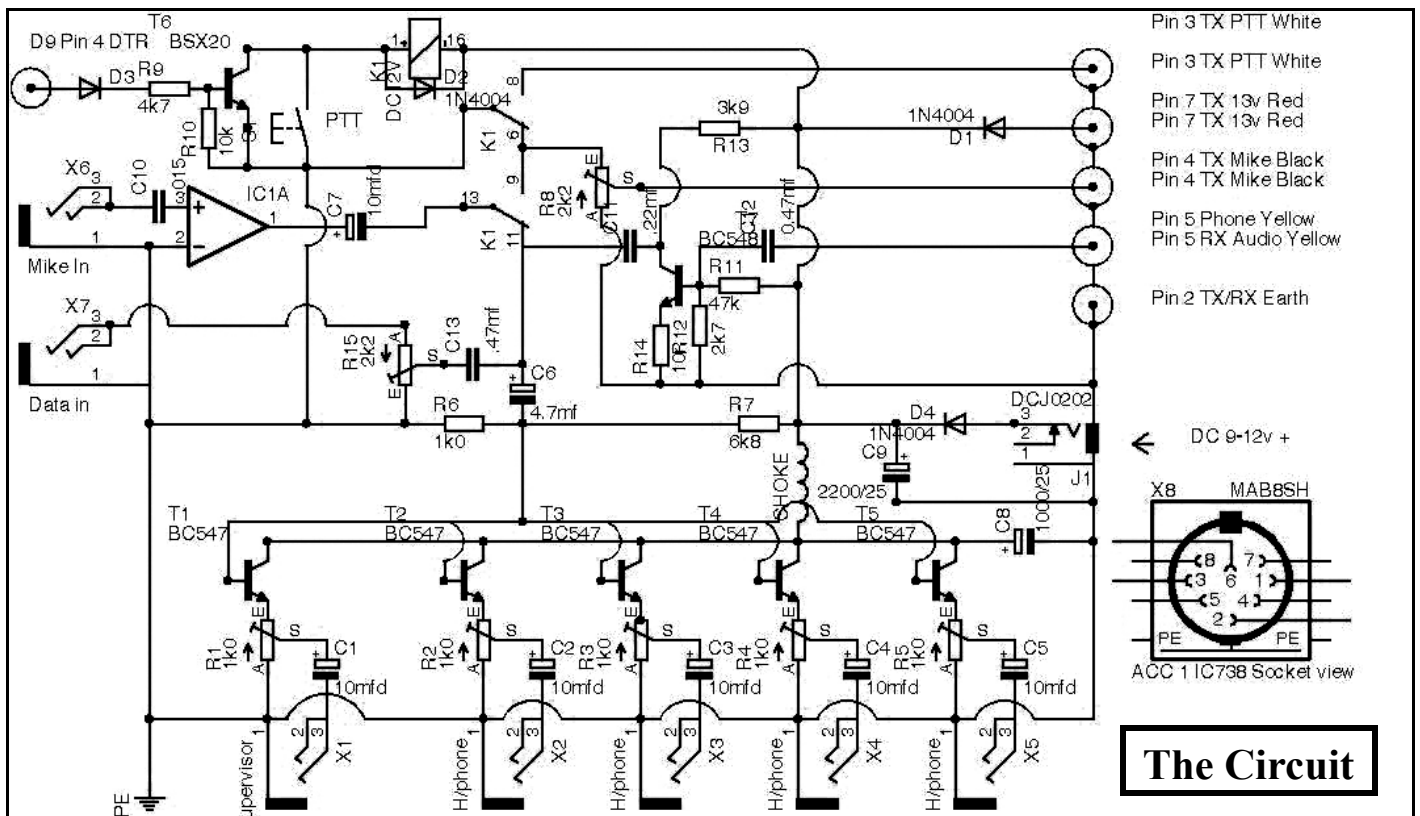

The microphone input from the instructors headset being an electret needs a dc supply through a fifteen kilo-

ohm resistor. A coupling capacitor of .001mfd is used to limit the low frequency audio response and provide good communications quality. The amplifier module is a Jaycar KC5152 kit using an LM386 IC. It mounts nicely on the main Vero board using the I/O pins provided.

A transistor switched relay is used for PTT functionality. This is controlled either from a spring loaded manual switch on the box or remotely via the DTR pin four of a serial port on a computer. To prevent data line earth loops and hum problems, a non-mains earthed laptop computer is preferred.

The Transceiver coupling cables needed detachable adapter leads to accommodate the different brand and models the club owns.

Construction: A 120mm x 40mm Vero board with the PCB potentiometers mounted along one edge was used. The transistor switched relay, pre-amp, microphone amp, decoupling chokes and filter caps all fitted easily on the board. The input-output, serial port and DC supply sockets were mounted on the box fronts and end panels. Attaching the Vero board to the front panel was achieved by the mounting nuts of the potentiometers. All the earth points were returned to a common Molex pin to which the

transceiver cable shields were also attached.

It was found that the units only worked successfully with a supply rail between 10 and 14 volts, so for the transceivers with only 8 volts available at the mike sockets, power had to be supplied by an external power pack or the caravans own 13 volt circuit. Isolation of the DC circuits was achieved by the inclusion of two power diodes.

Audio level adjustments are possible with the inclusion of internal preset pots.

Audio quality tailoring was done with the patient cooperation of club members and the trial and error substitution of coupling capacitors.

Use: A successful operational test was conducted with the Bago 150 car rally where it all worked surprisingly well.

It became apparent that for such a simple device an instruction manual will be required as will a panel engraving job to identify all the controls and connections. ■

ORARC Christmas Function

Following last year's successful function at the Port Macquarie City Bowling Club's smorgasbord, this venue was again chosen for our 2009 "Do". This year's function was held on Friday 27th November. The attendance of members and their XYL's totalled 18.

An evening that involved "eating as much as you can eat", coupled with much social chit-chat, and an occasional sip of the cup that cheers, all added to the enjoyable festive atmosphere.

Pictures are worth thousands of words, so it has been said. Try these for size:

The Trip To WA and Back : Part I

(by John, VK2CE)

In my last article, prior to the trip to Perth, I shared with you the ups and downs of installing transceivers in a late model car, but my woes weren't over yet. I found that the vehicle's charge rate was a constant 15.9 volts. I remembered that the Icom IC-706's absolute maximum supply voltage is 16.0vdc, so with that in mind, I didn't turn on the Icom. I monitored the charge rate and found that when the battery was fully charged, the charging voltage remained at 15.9vdc!

The Auto Elec couldn't shed any light on the subject, but then a chance meeting on the next Sunday, with the Service Manger of the local GM dealer, solved the problem.

Remember, I mentioned the circular device that is fitted around the negative (earth) cable? Well, just as I suspected at the time of installation, it's a current sensing device. The Service Manager informed me that the charge rate is now part of the engine management system and is monitored by computer and adjusted to suit the demands of the electrical system. It had been sensing more current flow through the earth cable and had upped the charge rate. He also warned me not to fit a larger capacity or a different type of battery because the main computer has to be changed as well! I wonder how many will get caught in this trap?

Needless to say, ASAP I removed both of the transceiver's earth wires from inside of the pickup around the main earth cable, and that restored the charge voltage to a respectable 14.5 vdc, no matter what load I put on the battery. It's a calcium battery which has totally different characteristics to a normal lead acid battery.

The trip over:

The trip to Perth started out on the 27th August, with the first hop to Gilgandra, my old home town, via Maitland. I heard a fair bit of traffic on 2m on the various repeaters around Newcastle, but commonsense dictated that with the density of traffic on the Pacific and New England Highways, my concentration should be on the driving!

As I turned west from a short stop in Stockton, the only other repeater I was able to trigger was the Mudgee repeater, with no takers.

We arrived in Gilgandra at sundown where we had 2 birthday parties to attend, a 60th and a 90th. The only contact I made in Gilgandra on the local VK2RCC

repeater was to Barry, VK4KKN, who happened to be visiting for the same parties. It's interesting to note that the RCC repeater is linked to 2 other repeaters, Dubbo and Parkes, so 2 metres covers a huge amount of real estate in that area.

On the following Monday, 31 August, at 6 am, we left Gilgandra for the remainder of the trip to Perth, with the first overnight stop planned at Port Augusta in South Australia, some 1170 Kms from Gilgandra. To be honest, I didn't know how I would go with an uncooperative knee, not being able to sit for 12 hours or more. Sure enough, by the time I got to Broken Hill I was very uncomfortable. Contact was made with only one local AR operator on their 2m repeater.

After I had left Broken Hill, near a small village called Olary, contact was made on 7.070 MHz with a couple of VK3's and then a well known call sign popped up, and contact was made with Bill ZCV, and it was a great feeling to hear Bill's voice.

Earlier on in the day I called in on the Travellers' Net on 14.116 MHz and gave them my plans of travel for the day and where I would be over-nighting. It was great comfort to know that wherever you were, someone was contactable. There are AR ops acting as relays in all states of Australia and monitoring the frequency each day from 0200 UTC and call backs begin from 0300 UTC. A big thank you to those who, without fail, monitor 14.116 MHz 365 days of the year.

We had a motel booked at Port Augusta and although feeling very weary and leg sore, we pressed on and when the lights of Port Augusta came into view, we were more than relieved!

Contact was made with one VK5 from our Motel room, on my hand held through the local 2m repeater, with no other takers.

The next day we left well before sunup, with our sights set on Mundrabilla, a "Motel"/Roadhouse some 1050 km west from Port Augusta, just 80 km east from the WA/SA borders. There was a heavy fog when we left Port Augusta. Being mindful of the kangaroo population, we drove very carefully through the fog, until we finally cleared it well after passing the Iron Knob turnoff and 1-1/2 hours of driving. Thankfully, there were no animals to be seen.

The country side looked a picture. The area had received a lot of rain and

was green everywhere. I surmised that the reason for the lack of 'roos on the highway was that plenty of fodder was available elsewhere.

I knew from the way I felt when we arrived in Port Augusta, that I had a fair chance that I wouldn't be able to make the long hops I had originally planned. However, thanks to the room in the Commodore, I was able to adjust the seat back, and down (it's all electric), adjust the steering wheel out and kick off my shoes. I was then able to drive with my legs fully outstretched, (don't you love cruise control!). That way I was able to exercise and stretch out. As a result, when we arrived at Mundrabilla in WA, I felt I still had a few hours driving in me, but commonsense dictated that I shouldn't!

Again, contact was made on the Travellers' Net that morning and the appropriate message passed as to where we would be over-nighting.

A B-Triple

One thing that impressed me was the B-triples across the Nullarbor. They have 3 trailers and track beautifully. They enjoy the 100Kmph speed limit because of their stability, whereas road trains are limited to 90Kmph. I found that, generally, truck drivers were very courteous.

The "Motel" at Mundrabilla was quite a shock... \$85 for a double and I doubt whether it would make it into the Backpackers' Manual for a preferred stop! It was clean and the bed was very comfortable, but the condition of the buildings was atrocious. When I booked the room a few weeks before I left Port Macquarie, the lady from the Roadhouse stressed that the rooms were very clean, cheapest on the Nullarbor. Indeed they were, but not very attractive: neither inside nor out!

The fuel price was also cheap in comparison to other roadhouses we had

Mundrabilla "Motel"

passed. At \$1.55 per litre, it was indeed the cheapest on the Nullarbor, with the price at Caiguna and Cocklebiddy being \$1.66 per litre. I found out later on that the same person owns the BP Roadhouses at Norseman, Caiguna and Cocklebiddy, so those were the ones to avoid purchasing fuel, if at all possible... (I couldn't!).

A meal was the next shock, with rissoles and veggies costing \$18.00. The veggies had been clearly cooked many hours before, but having paid that much for a meal, one eats it anyway! If you had ordered a T-bone with veggies, the asking price was \$32! But apart from road kill, what is the alternative? We had packed enough food of the type for breakfasts and lunch. This all got through the Border Dept of Agriculture inspections, so we bought only the evening meal.

The next fuel stop was Norseman at the end of the Eyre Highway.....

The mobile rig. Mundrabilla

Part II of John's narrative will continue in the next issue of OXTALES.
